SECTION 1

INTRODUCTION

INTRODUCTION

The information presented in this statistical report summarizes data collected from May to September 1984, as part of the on-going provincial park user survey program. This program was established in 1974 to provide current information for a variety of planning, research and operational/management functions. This is the first year that the Quetico Provincial Park Interior has been surveyed under this program.

Analyses of the data and the printing of the individual tables contained herein were performed through the utilization of the Statistical Analysis System (SAS) software package.

The interior survey was administered by the Quetico Park staff from the six ranger stations on a day-to-day basis. Every interior group purchasing an interior permit was asked to complete a questionnaire. A return rate of 29% was achieved (1232 returns from 4194 distributed) and forms the basis of the sample.

The questionnaire was designed in a self-administered format, being completed during the visitors stay in the interior and returned either at one of the ranger stations or to the Parks and Recreational Areas Branch in Toronto.

Questions contained in the survey obtained information on the characteristics of interior users including: the extent of park usage, travel data, Outfitting services and expenditures, marketing information, park perception, reservation service, interior regulations and fishing census (see Appendix for copy of Questionnaire).

Should more detailed or specific data be required, please contact the Parks and Recreational Areas Branch in Toronto.

Other . - Lakes identified on questionnaire but not listed in Quetico Fisheries Publication.

. LAKES THAT ARE NOT LISTED HAD 'O' RESPONSES PERTAINING TO FISHING PRESSURE

. Table 11.1 and 11.2 do not correspond in the following categories because:

total # of fish caught - in chart 11.2 a number of respondents indicated they caught fish but did not give a lake location thus # of fish caught lower

total # of groups

- in chart 11.2, groups may have fished on several lakes, counted more than once thus increasing number of groups

average species caught per group

- in chart 11.2 groups may have fished on several lakes, groups counted more than once thus lowering the average species/group
